When tension and stress build up in an area of the spine, it creates interference and "overloads" the nerve or nerves nearby, creating what is known as a subluxation. This subluxation acts similar to a blown fuse in your house. When a fuse blows in your home, certain areas or appliances may not function until that power is restored. Similarly, by finding and correcting any subluxations in your spine, specific chiropractic adjustments help restore power and function to those parts of your body.
